Premises in Beamer

Bernhard Nickel

September 10, 2008
What We’d Like to Accomplish
An Enumerate Frame with premises

(i) First premise.
(ii) Second premise.

\[ \therefore (iii) \] Conclusion.

This also allows reference to premise (i), (ii), and conclusion (iii).
Doing It
Preamble

Insert the following code into the preamble of your document. (An asterisk * marks a line-break you need to erase before the code becomes functional)
The first command relabels the enumeration environment so that all numbers appear in parentheses.

\setbeamertemplate{enumerate item}{(\insertenumlabel)}
These commands define the premise and conclusion commands.

\newcommand{\premise}[1][]{
  \renewcommand{\theenumi}{#1\roman{enumi}}
}

\newcommand{\conclusion}*{
  \setbeamertemplate{enumerate item}*{
    \therefore ($$\insertenumlabel$$)}}
Code in the Document
The Code for the initial slide

\begin{enumerate}
  \item First premise. \label{item:1}
  \item Second premise. \label{item:2} \conclusion
  \item Conclusion. \label{item:3}
\end{enumerate}

This also allows reference to premise (\ref{item:1}), (\ref{item:2}), and conclusion (\ref{item:3}).
Enjoy
